

INGÉ1 - UNIX
LAB 6 – Process Management
ESME Bordeaux-Lille-Lyon-Paris

Exercise 1 : Immediate Disconnection

Q1. Forcefully terminate your process named `bash`.

Exercise 2 : Background/Foreground

Q1. Start the `sleep` command in the background with a duration of 1000 seconds. Retrieve its execution in the foreground.

Q2. How can you send this process back to the background?

Q3. View the different jobs in progress.

Exercise 3 : Display PID

Q1. Launch in the background five `sleep` commands with a duration of 1000 seconds.

Q2. Determine in a single command the set of PIDs associated with these processes.

Q3. Kill all of these processes in a single command.
